Reviewer's report

Title: Non-Small Cell Lung Cancer with EML4-ALK Translocation in Chinese Male Never-Smokers is Characterized with Early-Onset

Version: 7 Date: 25 August 2014

Reviewer: Maria Wong

Reviewer's report:

Discretionary Revision

Does the tumour shown in Fig 4C show ALK expression? This figure is added in response to one of the reviewers' comments that ALK translocation adenocarcinomas are more likely to harbour a mucinous cribriform pattern and yet this feature is not shown on the IHC photo (Fig 4C) or tabulated results (Table 4) and therefore does not illustrate the intended purpose.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
