Reviewer's report

Title: Triple negative breast cancers express receptors for LHRH and are potential therapeutic targets for cytotoxic LHRH-analogs AEZS 108 and AEZS 125

Version: 2 Date: 7 March 2014

Reviewer: Achim Rody

Reviewer's report:

The authors report in their manuscript on a possible new therapeutic approach in TNBC. The expression of LHRH receptors and the destruction of tumor cells by cytotoxic LHRH conjugate seems to an elegant treatment option, since the expression of LHRH receptor seems to be a predictor of treatment response. The study presented here is sound and well performed. The methods used are clear, the statistical analysis is well done and the results are reported and discussed adequately.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
