Reviewer’s report

Title: Prevalence and types of thyroid malignancies among thyroid enlarged patients in Gondar, Northwest Ethiopia: a three years institution based retrospective study

Version: 8 Date: 7 October 2014

Reviewer: Anjali Mishra

Reviewer’s report:

Major Compulsory Revisions
The authors have addressed most of the issues in response to reviewer, however the same changes have not been incorporated in the manuscript. This is particularly relevant for methods and results section e.g. the authors have responded that no particular system of classifying FNAC results was used, yet they should mentioned exactly how were the results classified/ interpreted by them for the current study (4 categories or 5 categories). Similarly records regarding thyroid function and TNM categorization were not available.

Minor Essential Revisions:
PTC and FTC and are generally accepted acronyms for papillary thyroid and follicular thyroid carcinoma.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.

Declaration of competing interests:
