Reviewer's report

Title: MicroRNA in exosomes isolated directly from the liver circulation in patients with metastatic uveal melanoma

Version: 4 Date: 3 September 2014

Reviewer: Peter J Quesenberry

Reviewer's report:

Major compulsory revisions. Need to include controls for Melana studies in Fig 2
References for vesicle RNA transfer exclude the previous work of Ratajczak and the comitant work of Aliotta and Deregibus.
Please expand on the significance of this work - it appears marginal other revisions
Not clear the significance of the m
miRNA studies
Very small number of subjects

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
