Reviewer’s report

Title: Translation elongation factor eEF1A2 is a potential oncogene that is overexpressed in two-thirds of breast tumors.

Version: 3 Date: 8 August 2005

Reviewer: anil sood

Reviewer’s report:

Most of the concerns have been addressed. Would suggest mentioning the following 2 items in the paper:

1. Additional clinical information is not available.
2. p53 staining provides limited information regarding mutation status.

-----------------------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

-----------------------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

-----------------------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

-----------------------------------------------------------------------------------------------

What next?: Accept after minor essential revisions

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published
