Reviewer's report

Title: Membrane testosterone binding sites in prostate carcinoma as a potential new marker and therapeutic target: Study in paraffin tissue sections

Version: 3 Date: 30 June 2005

Reviewer: james mohler

Reviewer's report:

Authors have now eliminated stage that is inappropriate since now it doesn't describe their patient characteristics - need to properly describe - age, clinical stage, PSA if available.

Authors now use Gleason grading system but new results are confusing - statistics are lacking and Gleason sum is variable categorized as < 6, >6, or 6 as different points in the manuscript.

The manuscript remains poorly written.

What next?: Reject because scientifically unsound
