Reviewer's report

Title: Membrane testosterone binding sites in prostate carcinoma as a potential new marker and therapeutic target: Study in paraffin tissue sections

Version: 4 Date: 20 September 2005

Reviewer: Elmer Villanueva

Reviewer's report:

General

The Authors have made substantial improvements to the text. After a few minor suggestions, I would be happy to support the publication of the full manuscript.

-------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

None

-------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

1. Page 4. End the paragraph after the last question. Omit the rest of the text starting from the sentence beginning "Our findings show...".
3. Page 7. Paragraph 3. Test is misspelled. Please revise to "Mann-Whitney U"
4. Page 8. Paragraph 1. Modify the sentence "Mann-Whitney U was calculated, as a non-parametric alternative to the analysis of variance" to "The Mann-Whitney U test was used to compare the distribution of continuously-scaled outcomes by mAR expression."

-------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after minor essential revisions

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No
