Reviewer’s report

Title: Synchronous adenocarcinoma and carcinoid tumor of the terminal ileum in a Crohn’s disease patient

Version: 2 Date: 5 October 2005

Reviewer: Ioannis Koutroubakis

Reviewer’s report:

General

The manuscript has been improved but there is still a point concerning the information about the treatment of the patient.

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

The maintenance treatment of the patient during the seven years since diagnosis should be more clear. Continuous use of steroids is not accepted as a maintenance treatment of Crohn’s disease. She started azathioprine at very low dose and no other information about the further use of azathioprine is provided.

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after minor essential revisions

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: No
