Reviewer's report

Title: Acquisition of Anoikis Resistance in Human Osteosarcoma Cells Does Not Alter Sensitivity to Chemotherapeutic Agents

Version: 2 Date: 8 February 2005

Reviewer: Jorge Filmus

Reviewer's report:

The authors have now answered to some of my criticisms. However, one of the requested compulsory revisions was to provide an insight on the mechanism that explains the resistance to anoikis in cells that are sensitive to pro-apoptotic drugs. The authors have argued that this is beyond the scope of the paper. Without any mechanistic insight the paper is merely descriptive.
