Title: A Phase II Study of LFP Therapy (5-FU (5-fluorourasil) continuous infusion (CVI) and Low-Dose Consecutive (Cisplatin) CDDP) in Advanced Biliary tract Carcinoma

Version: 4 Date: 14 November 2005

Reviewer: Vittorio Gebbia

Reviewer's report:

General
The paper is well written an reported data from a phase II trial employng infusional 5-fluorouracil and cisplatin in biliary tract carcinomas. Results are interesting and in line with other reports.

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)
none

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)
Some english language mistakes. The discussion section may be reduced in size and length since it deals a lot on the use of venous catheters and about other drugs such as S-1.

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after minor essential revisions

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No
