Reviewer's report

Title: Growth and metastases formation of human malignant mesothelioma cell lines orthotopically implanted into the pleural cavity of immunodeficient mice.

Version: 10 Date: 12 February 2006

Reviewer: Amir Onn

Reviewer's report:

General

-----------------------------------------------------------------------------------
1. As suggested before, my major concern relates to the low level of writing. The paper needs significant amount of work from a language point of view. The paper cannot be reviewed properly at this time.
2. The differences in biology and advantages of orthotopic vs. subcutaneous tumor implantation are not clear.
-----------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

-----------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

-----------------------------------------------------------------------------------

What next?: Unable to decide on acceptance or rejection until the authors have responded to the major compulsory revisions

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Not suitable for publication unless extensively edited

Statistical review: No
