Reviewer's report

Title: Association Between Dietary Fat and Skin Cancer in an Australian Population Using Case-Control and Cohort Study Designs

Version: 3 Date: 18 April 2006

Reviewer: Teresa T Fung

Reviewer's report:

General
Manuscript much improved.

-------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

In the discussion section, it was mentioned (p 11) that energy has not been shown previously to be related to NMSC. The authors need to cite some references here to support that statement. There is a difference between existing data does not show an association versus no one has examined the association between energy intake and NMSC.

-------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

-------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after minor essential revisions

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: No
