Reviewer's report

Title: HEX expression and localization in normal mammary gland and breast carcinoma

Version: 5 Date: 6 April 2006

Reviewer: Takahiko Kogai

Reviewer's report:

General
I think my original concerns have been addressed appropriately.

------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

------------------------------

Discretionary Revisions (which the author can choose to ignore)
In MCF-7 cells, the efficiency of transfection with other chemicals, such as Effectene (Qiagen), or DEAE-dextran, instead of calcium phosphate, is usually high enough to evaluate effects of an exogenous transcription factor on a promoter activity.

What next?: Accept after discretionary revisions

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No
