Reviewer's report

Title: Paclitaxel and concomitant radiotherapy in high-risk endometrial cancer patients: preliminary findings.

Version: 5 Date: 23 May 2006

Reviewer: Patricia J. Eifel

Reviewer's report:

General
The authors' changes have significantly improved the manuscript.

-------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

-------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

The only remaining comment I had was that I do not understand what is meant by "Late toxicity included one subocclusive status..." If this means incomplete small intestinal obstruction, the authors should use clearer language.

-------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after minor essential revisions

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No
