Reviewer’s report

Title: Identification of genes specific to cisplatin resistance in human oral squamous cell carcinoma cell line

Version: 6 Date: 18 May 2006

Reviewer: paola perego

Reviewer’s report:

General
The author have provided satisfactory answers to the points raised. I only suggest a slight change to the title because there is no proof that the found genes are specific to cisplatin because their role in response to other drugs has not been studied. I suggest to change "specific to" in "associated with"

-------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

-------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

-------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept without revision

Level of interest: An article of importance in its field
