Reviewer’s report

Title: Four cycles of paclitaxel and carboplatin as adjuvant treatment in early stage ovarian cancer: the experience of the Hellenic Cooperative Oncology Group.

Version: 1 Date: 7 June 2006

Reviewer: Frederic Amant

Reviewer’s report:

General

-----------------------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

Although the authors have spent a lot of effort, the retrospective nature, the non-randomized strategy and the availability of large prospective randomized trials addressing these issues render these results less interesting for the clinician.

-----------------------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

-----------------------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

What next?: Reject because scientifically unsound

Level of interest: An article of limited interest

Quality of written English: Needs some language corrections before being published

Statistical review: No
