Reviewer’s report

Title: Celecoxib decreases prostaglandin E2 concentrations in nipple aspirate fluid from high risk women and women with breast cancer

Version: 3 Date: 25 August 2006

Reviewer: Margaret Wrensch

Reviewer’s report:

General

-------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

-------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

Minor revisions needed:
Page 8, 3rd line 2nd paragraph: change “at” to “for”.
Page 9, 4th paragraph, line 1: P-values in text do not match p-values in Table 4.
   Last line: change “associated” to “correlated”.
Page 10, line 8: The sentence beginning “The differences….” is confusing; do the authors mean “The differences in the ratios of NAF to serum levels”? Line 11: change “at” to “high”.
Page 11, 2nd paragraph: Delete the sentence, “Also of note….”. Since women with breast cancer are included in the high risk group, one cannot make the conclusion stated in the sentence.

-------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after minor essential revisions

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No
