Reviewer’s report

Title: Many Quality Measurements, But Few Quality Measures Assessing the Quality of Breast Cancer Care in Women: a systematic review

Version: 1 Date: 29 June 2006

Reviewer: Sally Lee

Reviewer’s report:

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

It is a paper of interesting topic and sound methodology. But will benefit from a more defined objective, i.e, why was the systematic review conducted and what was it trying to achieve?

It would also be interesting to see what the authors would recommend as essential indicators for quality of breast cancer care.

What next?: Unable to decide on acceptance or rejection until the authors have responded to the major compulsory revisions

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No
