Reviewer's report

Title: Health Profiles of 996 Melanoma Survivors: the M. D. Anderson Experience

Version: 5 Date: 21 March 2006

Reviewer: E Crocetti

Reviewer's report:

General
In the new version of the paper a multivariate logistic model has been used to take the effect of age (and of other variables) into account, as it was requested.
The Authors included a new Table (n.2) and a new period in pg.8-9 (nothing new in the discussion).
The use of the multivariate model could be extensively used throughout the paper instead of a number of univariate analyses.

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)
correct ; in the second sentence

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after minor essential revisions

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No
