Reviewer's report

Title: Transcription profile of non-immortalized breast cancer cell lines.

Version: 3 Date: 17 November 2005

Reviewer: Edgar Dahl

Reviewer's report:

General

The second revised version of the manuscript by Mariana Fernandez-Cobo et al. entitled "Transcription profiles of non-immortalized breast cancer cell lines" has considerably improved both in the quality of writing and the message extracted from the large amount of experimental data. The paper is now suitable for publication.

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

Discussion:
The term "signature pathways" is not clear. Do you mean "signal transduction pathways"?

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

page 4: cell line MCF10F (all from ATCC, MD) why ALL?, Different sublines?

What next?: Accept after minor essential revisions

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No
