Reviewer's report

Title: Elevated expression of VEGFR-3 in lymphatic endothelial cells from lymphangiomas

Version: 4 Date: 3 January 2007

Reviewer: annunciata vecchi

Reviewer's report:

General

------------------------------------------------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

------------------------------------------------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

------------------------------------------------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

The authors have made the changes required.

There are still some difficulties in fig.6 description, in my opinion. I would suggest to cite in the text the parts of figures with capital letters (A, B, C..) to avoid confusion with the panels inside each part. In fact fig.6A has panels a), b), c) and d) and fig.6B has also panels a), b), c) and d). The description of the data, referring for instance to fig.6b in the text, is not immediately clear (lines 21-24 of page 10).

What next?: Accept after discretionary revisions

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
