Reviewer's report

Title: Real time contrast enhanced ultrasonography in detection of liver metastases from gastrointestinal cancer.

Version: 1 Date: 13 March 2007

Reviewer: Kazushi Numata

Reviewer's report:

General
Authors state that CEUS is more sensitive than conventional US in detection of liver metastasis and findings at CEUS and CT appear to be complementary. I agree with an argument of author.

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

Page 19, Table 1. Please change the "numero" to "number".

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after minor essential revisions
Level of interest: An article whose findings are important to those with closely related research interests
Quality of written English: Acceptable
Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
Declaration of competing interests:

I declare that I have no competing interests.
