Reviewer's report

Title: Real time contrast enhanced ultrasonography in detection of liver metastases from gastrointestinal cancer.

Version: 2 Date: 26 May 2007

Reviewer: Edward Leen

Reviewer's report:

General:
The authors response to my first major compulsory revision is not satisfactory at all. Having a gold standard is key. This is basic science and has nothing to do whether this is a radiology or clinical approach.

-----------------------------------------------------------------------------------
Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)
The issue of gold standard has to be addressed again

-----------------------------------------------------------------------------------
Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)
Nil to add

-----------------------------------------------------------------------------------
Discretionary Revisions (which the author can choose to ignore)
Nil to add

What next?: Reject because scientifically unsound

Level of interest: An article of insufficient interest to warrant publication in a scientific/medical journal

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, and I have assessed the statistics in my report.

Declaration of competing interests:
