Reviewer’s report

Title: High-level inducible Smad4-reexpression is associated with gene expression profiles that predict a preferential role of Smad4 in extracellular matrix composition

Version: 2 Date: 4 September 2007

Reviewer: Karlheinz Friedrich

Reviewer’s report:

General

My concerns were met by the revisions and I recommend to accept the present version as is.

----------------------------------------------------------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

----------------------------------------------------------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

----------------------------------------------------------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

----------------------------------------------------------------------------------------------------------------------------------

What next?: Accept without revision

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
