Reviewer's report

Title: Effects of liarozole fumarate (R85246) in combination with tamoxifen on N-methyl-N-nitrosourea (MNU)-induced mammary carcinoma and uterus in the rat model

Version: 3 Date: 27 October 2006

Reviewer: Konstantin Christov

Reviewer's report:

General
I do not believe that this manuscript is of quality to be published in BMC Cancer.
The model (MNU) is well established, tamoxifen is used by injection and nobody knows what is the real dose accumulated, there is no mechanistic part. Therefore I would not recommend the manuscript for publication.

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

Discretionary Revisions (which the author can choose to ignore)
