Reviewer's report

Title: Implication of Xenobiotic Metabolizing Enzyme gene (CYP2E1, CYP2C19, CYP2D6, mEH and NAT2) Polymorphisms in Breast Carcinoma.

Version: 2 Date: 19 February 2008

Reviewer: Rui Medeiros

Reviewer's report:

The authors made a good revision of the manuscript and made the major corrections suggested. However, we think that the following suggestions to the discussion section should improved the manuscript and authors should be referred to recent papers on the field regarding other hormonal associated tumors (eg:prostate or cervical cancer) in similar mediterranean populations. these may add more interesting clues to the results on the field (Hamdy S, 2002; Ferreira P, 2003; Scordo MG, 2004; Agundez , 2004; Costa S, 2002, 2005; Lemos M 2007)

What next?: Accept after minor essential revisions

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
