Reviewer's report

Title: Cervix carcinoma is associated with an up-regulation and nuclear localization of the dual-specificity protein phosphatase VHR.

Version: 1 Date: 4 March 2008

Reviewer: Duk-Soo Bae

Reviewer's report:

This is an interesting paper looking at the up-regulation and nuclear localization of the dual-specificity protein phosphatase VHR in cervical carcinoma. The author suggested that VHR can be considered as a new marker for cancer progression in cervical carcinoma and potential new target for anticancer therapy.

The paper is well written, analyzed and presented.
