Reviewer’s report

Title: Reduced expression of N-Myc downstream-regulated gene 2 in human thyroid cancer

Version: 3 Date: 30 August 2008

Reviewer: Theodoros Foukakis

Reviewer’s report:

The authors have adequately answered my comments and substantially improved the manuscript.

- Minor Essential Revisions:
  1. The Bonferroni correction is used when "multiple comparisons" are made. It is unclear whether it is used appropriately by the authors (it should be stated which p values are "corrected"). Furthermore, the text both in the methods and in the results section should be modified accordingly.

- Discretionary Revisions
  1. The discussion section could be revised avoiding the repetition of the findings in detail and rather discussing the importance, implications etc of the results.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
