Reviewer’s report

Title: Heat shock protein90 in lobular neoplasia of the breast

Version: 4 Date: 11 August 2008

Reviewer: Harriet Kluger

Reviewer’s report:

The authors have addressed my concerns about cohort size and inclusion of invasive cases by discussing the shortcomings of the study in the last paragraph of the conclusions, rather than expanding the cohort and including invasive lobular carcinoma studies and correcting the shortcomings. I would think that at a large hospital in a major European city there would be an abundance of these tissues available for analysis.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
