Title: Voluntary Exercise Inhibits Intestinal Tumorigenesis in Azoxymethane/Dextran Sulfate Sodium-Treated and ApcMin/+ Mice

MS no. 1855186979179752

Version: 2 Date: 10 February 2008

Reviewer: Takuji Tanaka

Reviewer’s report:

General

This manuscript describes interesting findings for readers who are interested in cancer chemoprevention.

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

1. We need discussion regarding the findings of LTB4 in the experiments (Page 13, line 2-5 from the bottom and Table 4).
2. I guess exercise causes the immunomodulation in mice. Considering this point, the authors further strengthen the findings observed.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
