Reviewer's report

Title: Role of cAMP in the promotion of colorectal cancer cell growth by Prostaglandin E2

Version: 1 Date: 10 September 2008

Reviewer: Frank Neuschäfer-Rube

Reviewer's report:

As mentioned in my first review the paper shows convincing data that proliferation of colon cancer cells is stimulated by EP3-receptor mediated lowering of cAMP concentration by low PGE2 concentrations. As the authors strengthened the manuscript by using specific antagonists and by measuring PGE2-stimulated intracellular cAMP concentrations I would recommend to accept the paper.
