Reviewer's report

Title: Role of cAMP in the promotion of colorectal cancer cell growth by Prostaglandin E2

Version: 1 Date: 9 December 2008

Reviewer: Christina C Leslie

Reviewer's report:

Overall I think that the study by Loffler is well executed and provides convincing new information about the role of PGE2 and PGE2 receptors in regulating proliferation of colorectal cancer cells. The authors responded to the previous reviewer's concerns in a very thorough and thoughtful manner and went out of their way to conduct the necessary control experiments as requested. I also think that the paper is quite well written. In my opinion it is acceptable for publication in BMC cancer.
