Reviewer’s report

Title: Glycogen Synthase Kinase-3 Inhibition Disrupts Nuclear Factor-kappa B activity in Pancreatic Cancer, but Fails to Sensitize to Chemotherapy

Version: 2 Date: 2 March 2009

Reviewer: Richard Bold

Reviewer’s report:

This revised submission describes the effect of small-molecule mediated inhibition of GSK3 in gemcitabine treatment of pancreatic cancer cells. The authors provide a detailed response to the comments of the three prior reviews. The authors recognize various areas of the manuscript that conflict with other published data, though the report remains important for linking GSK3 and NF-kB in pancreatic cancer.

Major revisions:
None.

Minor revisions:
none.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
