Reviewer's report

Title: Glycogen Synthase Kinase-3 Inhibition Disrupts Nuclear Factor-kappa B activity in Pancreatic Cancer, but Fails to Sensitize to Chemotherapy

Version: 2 Date: 4 March 2009

Reviewer: Heiner Schäfer

Reviewer's report:

The authors have sufficiently addressed the major points and queries. In particular, the authors emphasize the role of GSK3 in NF-kappaB regulation and discuss cell cycle dependent effects of gemictabine in the revised version of the manuscript. Even though it would have been interesting to elucidate whether other apoptotic stimuli are affected by GSK-3 inhibition in PDAC cells, the paper is now suitable for publication in BMC Cancer.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
