Reviewer's report

Title: siRNA Inhibition of Telomerase Enhances the Anti-Cancer Effect of Doxorubicin in Breast Cancer Cells

Version: 1 Date: 21 November 2008

Reviewer: An-Gang Yang

Reviewer's report:

The above-referenced manuscript describes that siRNA inhibition of hTERT enhances the anti-cancer effect of Doxorubicin in breast cancer cells. The results presented here are of some interest. But, I feel that this manuscript just confirms the published information. Moreover, the results are fairly modest and not completely convincing.

1. Major compulsory
   The author must do some Immunofluorescence or Immunohistochemistry experiments to confirm that hTERT has been knocked down by siRNA in breast cancer cell lines and xenograft tumor samples.

2. Minor Essential Revisions
   The Fig 1a looks like Fig 1b. The cell line name should be labeled on them, respectively. The X axle notes in Fig 2a and Fig 2b should be "days", rather than "day".

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
