Title: ALA-D activity is a reliable marker for oxidative stress in bone marrow transplantation patients

Version: 2 Date: 24 November 2008

Reviewer: Andrea Ferencz

Reviewer’s report:

Page 4. "a condition known as oxidative stress, which can be associated with serious complications such as hepatic failure."

Why did you mention hepatic failure? As our knowledge the small bowel is one of the most sensitive tissue to oxidative injury, mainly during intestinal transplantation.
