Reviewer's report

**Title:** Induction of p21 WAF1/CIP1 via the EP4 receptor mediates the regulation of cell cycle progression by cyclooxygenase-2 in colorectal cancer

**Version:** 1  **Date:** 17 March 2009

**Reviewer:** Denys Wheatley

**Reviewer's report:**

It is a very good study and should be published. There are just a couple of problems with the syntax, which I do not think is enough to really make it necessary for the authors to make any revisions. The study is important in its field. I do not think there are any problems with the statistics.
