Reviewer's report

Title: Prognostic relevance of Wnt-inhibitory factor-1 (WIF1) and Dickkopf-3 (DKK3) promoter methylation in human breast cancer

Version: 2 Date: 4 May 2009

Reviewer: Mario Fraga

Reviewer's report:

The authors have accomplished most of the points raised by the referrers. Although I still think that including bisulfite sequencing and expression experiments would improve the quality of the manuscript, the explanations given by the authors are convincing and thus, the manuscript can be published as it.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
