Reviewer's report

**Title:** Role of CD133 antigen expression in ovarian cancer patients

**Version:** 1  **Date:** 13 May 2009

**Reviewer:** Aristotle Bamias

**Reviewer's report:**

This is a well written paper. It reports results on another marker, among the numerous which have been studied in ovarian cancer. As of today, no tissue marker has an established role in decision making in this disease, regardless of negative or positive associations reported. The results of this specific marker are negative and no subgroup with a specific interest has been identified. Although negative results can be of interest, I believe that the current paper does not add to the current knowledge.

**Level of interest:** An article of insufficient interest to warrant publication in a scientific/medical journal

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.

**Declaration of competing interests:**

I declare that I have no competing interests
