Reviewer's report

**Title:** Role of CD133 antigen expression in ovarian cancer patients

**Version:** 2  **Date:** 11 June 2009

**Reviewer:** Dimitrios Spentzos

**Reviewer's report:**

The authors have answered the questions posed in the initial review. However, given the negative nature of the results, I would suggest that the authors change the title, since in its current wording, it may be somewhat misleading and interpreted as suggesting that an actual association was found. The authors should come up with a title that more accurately reflects the findings of the study.

**Level of interest:** An article whose findings are important to those with closely related research interests

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.

**Declaration of competing interests:**

I declare that I have no competing interests.
