Reviewer’s report

Title: GLUT1 gene is a potential hypoxic and prognostic marker in colorectal cancer patients

Version: 2 Date: 23 December 2008

Reviewer: Gemma Dominguez

Reviewer’s report:

Major Compulsory Revisions:

- Authors have tried to answer the reviewers’ comments and although in most cases I agree with the reply, sometimes the respond is placed in a position in the text where it has no sense and without any connection with the rest of the content. For example, to clarify that the authors used the tumor and the normal counterpart tissue of the same patient from 10 CRC, they place a sentence in line 20 page 19 of the Discussion. This sentence has no sense here, not only because it should be added in the Materials section, but also because it is added without any connection with the previous and the next text. Authors should carefully revise the text in this way. I think that although the content of the manuscript is suitable for publication in this journal, the presentation in the current way is unacceptable. English style should also be deeply corrected.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Not suitable for publication unless extensively edited

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
