Reviewer's report

Title: Nuclear expression of Snail1 in borderline and malignant epithelial ovarian tumours is associated with tumour progression

Version: 1 Date: 15 July 2009

Reviewer: Michael Quinn

Reviewer's report:

The lack of association with grade of tumor and Stage of disease would suggest that Snail 1 expression in fact is not important in the development/progression of the disease and needs comment in the discussion

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
