Reviewer's report

Title: Matrix gla protein (MGP): an overexpressed and migration-promoting mesenchymal component in glioblastoma

Version: 2 Date: 25 March 2009

Reviewer: Tim Demuth

Reviewer's report:

The authors provided MGP ELISA results for different cell lines in the results section but quantification of siRNA knockdown by ELISA is still missing. Since a highly quantitative assay is available it should be used as it is more informative than immunofluorescence. Also, presentation of the ELISA data in a figure appears appropriate.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
