Reviewer's report

**Title:** Gain in cellular organization of inflammatory breast cancer: A 3D in vitro model that mimics the in vivo metastasis

**Version:** 2 **Date:** 21 November 2009

**Reviewer:** Barbara Vanderhyden

**Reviewer's report:**

The authors have satisfactorily addressed all of my previous concerns. There is only one minor essential revision that has arisen from the inclusion of a new figure. In Figure 8A, bottom panel, the structure indicated by the arrow is not clear, and is made even more obscure by the red text ("Figure 8") placed on top of it. It should be acceptable if the structure is clearly apparent when the red overlying text is removed.

**Level of interest:** An article whose findings are important to those with closely related research interests

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.

**Declaration of competing interests:**

I declare that I have no competing interests.
