Reviewer's report

**Title:** Expression of the costimulatory molecule B7-H3 is associated with prolonged survival in human pancreatic cancer

**Version:** 2 **Date:** 13 October 2009

**Reviewer:** David D Ramsden

**Reviewer's report:**

I have no major criticism of the revised paper. Two very minor points regarding the legend to fig. 1. The first sentence of this is incorrect as it stands. Clearly it is not the characterization of 68 tissues, because there are only four figures. It would also help to point out the fact that the brown stain is in fact what is meant by positive.

**Level of interest:** An article of importance in its field

**Quality of written English:** Acceptable

**Statistical review:** Yes, and I have assessed the statistics in my report.

**Declaration of competing interests:**

I declare that I have no competing interests
