Reviewer's report

Title: Peripheral capillary nonperfusion in asymptomatic Waldenstrom's macroglobulinemia

Version: 1 Date: 15 July 2010

Reviewer: Rajvardhan Azad

Reviewer's report:

DISCRETIONARY REVISION

Authors can consider mentioning angiography findings in the Left eye as well along with mentioning the refractive status of eye under investigation (as the other eye was mentioned to be myopic). Changes are expected to be bilateral in the disease under consideration and presence of only unilateral changes may point to an alternate hypothesis which may include operated vitrectomy procedure as well.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
