Reviewer's report

Title: High-dose antioxidants for central serous chorioretinopathy; The randomized, placebo-controlled study.

Version: 3 Date: 23 February 2012

Reviewer: Catherine Meyerle

Reviewer's report:

Minor Essential Revisions
1) Page 10 - The authors wrote "The study also excluded cases with complicated CSC such as diffuse retinal pigment epitheliopathy or large pigment epithelial detachment AND A FEW CASES IN THE STUDY SHOWED CYSTOID MACULAR EDEMA." Since they did not exclude cases with intraretinal edema, this statement should be removed. Instead, they can provide this OCT information in their section providing background on the patients (perhaps in the section where the authors describe the various fluorescein leakage patterns noted at baseline).

2) I would recommend a final editing check to remove any awkward wording.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
