Reviewer's report

Title: Indocyanine green angiography findings in patients with long-standing Vogt-Koyanagi-Harada disease: a cross-sectional study

Version: 2 Date: 9 April 2012

Reviewer: Feng Wen

Reviewer's report:

1. The results of the article may be better to add the table to show the ICGA findings in detail.
2. The figures of ICGA showed in the article is not enough to reveal the finds of VKH, please add more figures of ICGA or typical cases.
3. The article not to reveal the choroidal folds and Dalen-Fuchs nodules changes in VKH, How about the choroidal folds and Dalen-Fuchs nodules play a role in the paper?

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
