Title: Cyclosporine A 0.05% Eye drops for the Treatment of Subepithelial Infiltrates After Epidemic Keratoconjunctivitis

Version: 1 Date: 11 June 2012

Reviewer: serge doan

Reviewer's report:

This is a well written manuscript. Here are some questions or recommendations:

1. In the abstract, result section, you should indicate the number of patients for whom CsA was discontinued, length of follow up after CsA withdrawal and number of recurrences.

2. Table 1, you should indicate for each patient: 1-duration of steroids (and also comment if CsA was prescribed for increased ocular pressure); 2a-if CsA was discontinued, 2b-for how long, 2c-if recurrence.

3. The problem of recurrences after stopping CsA treatment is crucial. The adequate duration of treatment, recurrence rates and practical recommendations should be addressed in the discussion.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
