Reviewer's report

**Title:** Valacyclovir in the treatment of Acute Retinal Necrosis

**Version:** 1  **Date:** 5 July 2012

**Reviewer:** Yan Guex-Crosier

**Reviewer's report:**

This article presents very interesting results of retrospective analysis of ARN treated by 2 g TID of oral valacyclovir.

The authors should clearly state that this dosage corresponds to high dosage of oral valacyclovir in the method section. This point is well developed in the discussion. To avoid also systemic complications such as renal insufficiency a close follow-up of creatinine should be recommended. A good hydric hydration is also recommended.

**Level of interest:** An article of importance in its field

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.
